LED Monitors

- the eco-friendly alternative.

Do you still have a clunky old CRT monitor on your desk? Have you thought about having TWIN monitors connected to your PC? Great for having multiple pages open and easily visible at the same time. Most of us know about the thin LCD monitors available but what about the new LED slimline monitors?

LED Monitors are the latest screens on the market and have many advantages over LCD.

- They are thinner
- They weigh less
- They are more robust
- They use far less power to run – as much as 40% less than an LCD
- The picture quality is amazingly rich
- They are eco-friendly as no mercury is used in their production

**PHILIPS
22" LED
Black with
speakers
\$327**

LED monitors are also a lot softer on the eyes than LCD monitors which make them popular with people who work for long hours on their desktops computers.

Isn't it time you upgraded your monitor to a new LED version?

There is a range of brands and sizes available from 19" to 24" with and without speakers, in either 4:3 or 16:9 formats. Talk to us about the monitor that's right for you. Here are some options in various sizes:-

**LG: 23"W
LED Black
\$429**
